

## **APP CONTROL**

The Provida Heat&Beat can also be controlled by an app that has been downloaded to a tablet or smart-phone via a Bluetooth connection.

This app is available in the app store for Apple devices, pls search “Sunkare” and download it. It is also available for Android in the Google Play Store. In order to be able to use the app, turn on the bluetooth connection on your smartphone or tablet and select Sunkare.

With the app, you can:

- Remotely switch the device on and off.
- Gradually adjust the heat from 0 to 100%.
- Set a timer that automatically switches the device off.
- Adjusting the speaker volume.
- Adjusting the colour and brightness of the LED lighting.
- Set the sensitivity of the shock safeguard.
- Set multiple heaters individually.
- Protect your app control with a password.

### **Turning on the speakers and establishing the Bluetooth connection**

1. In standby position, short press the remote control button  , turn on the power of the Bluetooth speakers, then long press this button in order to enter into Bluetooth pairing mode.
2. open the Bluetooth function in your iPhone, iPad or Android device, find the BTspeaker in the device lists, then connecting.
3. Connecting successful will have prompt tone, then you can play music by your iPhone, iPad or Android device.
4. But  again, it will turn off the bluetooth speaker, The next open will automatically connect you have paired devices.

### **Adjusting the colour and strength of the LED lighting**

Use  button to turn on the LED lighting. The LED lighting is intended as atmospheric lighting, adjust the light strength using the + and - keys on the app. You can also use them to set a colour for the lighting and select constant light (smooth) or light that flashes with the music.

### **Shock safeguard**

The Provida Heat&Beat has the option of s shock safeguard that switches the device off if it is shocked in any way. The shock safeguard can be activated with the app and the sensitivity can then be set on a sliding scale. When the device is supplied from the factory, the shock safeguard is off. Once the shock safeguard has been

activated, it can be operated via the remote control or manually. If the shock safeguard has switched the device off, the red light at the reception point will blink. Check to ensure that the device has not been damaged. If everything is ok, you can restart the device by:

1. Using the remote control to switch the device off and then on again.
2. Switching it off and on again using the switch, and then selecting the desired output using the reset button (remote control)
3. Switching the device off and on again with the app.

- Open the APP store or Google Play on your device.
